GenAI Reporting

Report Better
View Scans Faster
With Intelligence

Dual Editor Support: Word & HTML
Generate AI-assisted radiology reports seamlessly in Word or HTML - no copy-paste required.

Dictation to Direct Template Edit
Convert dictation instantly into structured, near sign-ready reports with minimal edits.

Auto Impression Generation
Automatically generate clinically aligned impressions directly from findings.

Correct Section Mapping & Placement
AI automatically places findings into the right report sections for clarity and consistency.

Built Around Real Radiologist Workflow
Use your own templates, dictate naturally, and generate fully editable reports - no workflow disruption.

Unified Viewer + Reporting Platform
View images, dictate findings, and finalize reports in one integrated workspace- fewer switches, faster turnaround.

Smart Generation with Personalization
Adapts impression style to match each radiologist's preferred reporting style.

Summary & Previous Report Comparison
Quickly summarize reports and highlight interval changes from prior studies

Real-Time AI Insights Integration
Integrate AI outputs directly into the report draft for faster, more accurate reporting.

Multi-Device Platform
Works seamlessly across desktop, mobile, and iPad — fully compatible within clinical viewers.

Translation Support
Translate entire reports seamlessly across multiple languages.

Enterprise-Ready
Supports multi-modality reporting, digital signatures, audit trails, and PACS/HIS integration.
